

## Bed & Border

**LOW-COST  
CLEANUP  
GIVES  
HIGH-VALUE  
CURB  
APPEAL!**

Families are spending more time outdoors and treating their yards as extension of their home. After spending time and money creating a nicely landscaped property, are unwelcomed weeds compromising the appearance of these spaces? Weeds spread by seeds through the air and through runners in their root system. Eradicating them once doesn't rid them permanently from your gardens. It can take a lot of work to keep this nuisance at bay, but there is a solution.

With Fit Turf's *Bed and Border Weed Control* Program, we can help to keep your landscape weed-free all season long. By pre-treating problem areas in your mulch and rock beds, your gardens can be the showplace of your neighborhood.

All applications are handled by our state-certified, professional technicians that take extra care to do it right with no harm done to any of your existing landscape plants. If you would rather spend weekends relaxing instead of pulling weeds, give us a call. We make it easy for your gardens to be weed-free!

**KEEP NATURE'S  
LITTLE FRIENDS  
OUT WITH  
PERIMETER  
PEST CONTROL**

Ants, roaches, spiders...they all consider your home their own. To stop the migration, a comprehensive perimeter pest control program is the best protection to build a barrier between your home and yard from these unwanted visitors.

Whether you choose to do-it-yourself or hire a professional, the most effective pest control programs are adjusted for each season and work in tandem with the present condition of your lawn.

Fit Turf's 4-application, **Perimeter Pest Control** program keeps ants, spiders, ticks, and dozens of other pests outside of your home by creating a safe, non-invasive, invisible shield around the foundation of your house including the cracks and crevice insects love to find. To find out more, just give us a call.

**FIT TURF**  
Easy.Friendly.Excellent.  
HAPPENINGS

Count on Fit Turf to relieve you of worry and free up your yard work time for other improvements and interests this summer. We'll watch over the health of your lawn – month after month all year 'round.

Whatever the weather, the latest threatening disease, or the current state of affairs, insect-wise, Fit Turf will react and respond with just the right mix of treatment and tender loving care.

That's what customer service is all about!

If you ever have a question about your service or a concern about the well being of your turf, just call us at 303-221-6900.

**PROTECTING YOUR LANDSCAPE  
INVESTMENT FOR THE LONG-TERM**

Most people who put in flowers every year know to water and feed them for the best growth. They may even spray for common pests and disease problems specific to these plants. But many people forget that the same landscapes with mature trees and shrubs have similar needs.

In nature, trees are able to thrive with the constant decomposing of material surrounding the plant. In your yard, that same tree or shrub is not able to get these kinds of nutrients naturally. In fact, it's competing with other plantings, including your lawn, for what is available. This makes them more susceptible to disease and insect damage and can stifle their growth and beauty.

Proper care of your trees and shrubs has a tremendous long-term payoff. Better color, shape and overall health will save you money in correcting problems and possible replacement in the future. For the do-it-yourselfer, many garden stores can advise you on products for your landscape.

If you prefer not worry about it, Fit Turf's *Fit Tree Program* offers a Deep Root Feeding for your entire landscape which provides a balanced feeding beneath the surface directly into the root system. We'll also evaluate your property for damaging insects and disease that may have already taken hold and make recommendations and corrective actions.

**For more information, give us a call at 303.221.6900.**

**DID YOU  
KNOW?**

- 90% of the weight of a grass plant is in the roots.
- Mature trees that shade your house can cut your cooling bill 15% – 40%.
- The typical lawn can absorb enough carbon dioxide and release enough oxygen to sustain a family of 4.
- The average front lawn has the cooling equivalent of two home central air conditioning units.
- Landscape improvements can add up to 15% – 20% to the value of your home.
